

MODsense Gateway

The perfect extension for MODsense. The automatic interaction point for your MODsense system providing real time updates at critical spots.

Plug and Play

Our gateway solution is truly plug and play. Connect the gateway to a power source and it will configure itself using a cellular connection. And: it does not interfere with your existing infrastructure.

Configurable Range

Configure the reach of the gateway to match your needs. Set to maximum distance to receive updates for all loggers within reach – or limit the distance to get exact location information about your shipments.

Automated Real Time Data Acquisition

Data acquisition can be fully automated with the MODsense Gateway, reducing your logger handling costs and improving data acquisition reliability. The data is automatically forwarded to the MODsense system, where further actions can be automatically triggered.

Multipurpose Use

Our gateway solution can be used in many environments and for different applications. Install in strategic positions along your supply chain for intermediate updates or set them up for automated logger stop and readout at the final destination.

Characteristic	Specification
Usage Type	Static
Modes	Intermediate and terminal readout
Communication Interfaces	4G, 3G, 2G, WiFi IEEE 802.11abgn, Bluetooth, Ethernet, USB
Power Consumption	< 5 W
Operating Range	-40°C to +70°C (-40°F to +158°F)
Protection Class	IP 40
Dimensions & Weight	Width 85/111mm (3.35/4.37") x height 32mm (1.26") x depth 110mm (4.33"), ca. 250g (8.8oz)
Certifications	RED, RoHS, WEEE, REACH FCC according to 47 CFR, Part 15B
Markings	CE/FCC
